

CASE STUDY

Vision Envelope | Server Migration Focused on Speed and Uptime

Vision Envelope needed faster access to critical files and an IT partner who understood the real cost of downtime. We led a server migration that improved performance and backed it with fast, responsive support when it mattered most.

CLIENT: Vision Envelope

INDUSTRY: Printing and related support activities

LOCATION: Charlotte, North Carolina, USA

SERVICES: Custom envelope printing and manufacturing, business stationery, forms, labels, banners.

ABOUT VISION ENVELOPE

Vision Envelope is an envelope supplier supporting high-volume production and order fulfillment. Their day-to-day operations depend on fast access to files, reliable systems, and minimal downtime to keep production moving and customer commitments on track. In an environment where delays quickly turn into lost time and revenue, technology performance is critical.

THE CHALLENGE

Vision Envelope was experiencing slow file access while operating in a cloud-based environment. Delays in retrieving files impacted daily workflows and made routine tasks take longer than they should.

Beyond performance issues, downtime was a serious concern. When systems went down, every minute mattered. They needed an IT partner who not only had the technical ability to fix problems, but who also understood the financial and operational impact of being offline, and would respond with urgency.

Vision Envelope needed faster systems, a reliable migration plan, and support they could trust when issues arose.

THE T3 MSP CYBERSECURITY & IT SOLUTION

We helped Vision Envelope migrate their server environment to improve performance and reliability. The goal wasn't just to move data, it was to create an environment where files were accessible quickly and systems supported the pace of the business.

Our approach included:

- Migrating the server to improve file access speed and performance
- Minimizing disruption during the transition
- Providing fast, responsive support during and after the migration
- Treating downtime as a priority, not a ticket in a queue

When issues arise, our team responds quickly and does what it takes to restore systems, because we understand what being down really costs.

THE RESULT

Vision Envelope now benefits from:

- Faster access to critical files
- Improved system performance compared to their previous cloud setup
- An IT partner that responds quickly when problems occur
- Reduced impact from downtime and faster issue resolution

Most importantly, they have the confidence that when systems go down, we act with urgency, and get them back up.

WHAT VISION ENVELOPE SAYS ABOUT WORKING WITH US

"T3 MSP helped us migrate our server, and now we can access our files much quicker than when we were on the cloud. T3's team responds quickly to any problems and will do what it takes to correct them when we are down. They understand the cost of being down."

Mark Zerona, Vision Envelope
